What to do in an asthma attack

- 1 Make sure the child takes one to two puffs of their reliever inhaler, (usually blue) preferably through a spacer
- 2 Sit the child up and encourage them to take slow steady breaths
- 3 If no immediate improvement, make sure the child takes two puffs of reliever inhaler, (one puff at a time) every two minutes. They can take up to ten puffs
- 4 If the child does not feel better after taking their inhaler as above, or if you are worried at any time, call 999 for an ambulance. If an ambulance does not arrive within ten minutes repeat step 3.
